EXPERIENCE SUMMARY:

11 years of experience in software Quality Assurance with special focus on Test Automation using UFT, Selenium with java, Cypress, Playwright, Katalon Studio, Mobile Automation, Test management tools ALM, Jira, Zephyr and Devops
6 years of experience in Devops implementation using Jenkins, Bitbucket, docker, Kubernetes and Helm.
2 years of experience in setup store data like promotion, discounts, products in hybris and validation against UI.
6 years of experience in API or system testing
I had rich experience with China development team (Mandarin)
4.6 years of experience in OpenText Products like Archive Link, SAP VIM, Content Server, Enterprise Scan and Imaging Viewers
4 years of Experience in Performance Testing using JMeter
Proficiency in managing logging stack such as Kibana Dashboard, Grafana and Prometheus
Knowledge of SRE practices and reliability principles
Experience with GCP and AWS
Experience in writing SQL Queries
Experience in using SOAP UI and Post Man
Experience with Linux systems configurations
Expertise in setting up test environment server like Unix/Linux/Oracle/IBM pac
Experience in Retail Banking, Healthcare and Payments.
Experience in various domains like a property and casualty insurance using Guide wire product, e commerce and Health care
Valid B1 visa for USA
Experience in using AS400 and AS400 Macros
On premise experience in working with clients to evaluate business needs.
Ability to assimilate changes in technological environment and willing to work with a team environment or independently.

WORK EXPOSURE:

Working as a Staff Software Engineer for Exaze Hyderabad from June 2024 to till Date
Worked as a Senior Test Engineer for OCBC Bank Singapore from September 2022 to March 2024
Worked as a Lead Quality Assurance Engineer for OpenText Technologies Hyderabad from July 2018 to September 2022
Worked as a Senior Software Engineer for Cigniti Technologies Hyderabad from May 2014 to till July 2018

ACADEMIC PROFILE:

B. Sc Computer Science. From K.U Warangal in 2010 with 80% Aggregate.

Client: Discovery.

Role: Staff Software Engineer

Tools: Accelq, Fitness API, JMeter, Gerrit, Jenkins, Testkube, AWS Cloud, Grafana, Kubernetes, JavaScript, TypeScript, Head Spin, Lambda Test

Responsibilities:

Involved in E2E Test processes
Identify gaps in existing Test processes and implement best practices
Managing deployments tracking on time deployments
Co-ordinating with Test Program Manager for implementing Testing progress
Publishing dashboards and highlighting any test delivery delays
Managing Jmeter Test executions through Testkube
With help of Power BI Building Test Automation Dashboard
Performing POC's on Test Automations stack like Playwright and Cypress
Manage/enhance Grafana Dashboard for functional reliability and Performance tests
Manages test automation pipeline
Managing Testkube on aws Kubernetes cluster

Client: OCBC BANK.

Role: Senior Test Analyst

Project: LoginDecom (Web and Mobile Automation, API)

Tools: Selenium with Java, REST Assured API, Postman, Cucumber and TestNG Bitbucket, Jenkins, Kafka, OpenShift, K8s, Kibana Dashboard, UFT, Postman, SOAPUI,

Description: LoginDecom is migration of monolithic login functionality into micro services architecture, Validating the details via INB (Internet Banking) and MB (Mobile Banking) based on 1FA and 2FA authentication through payment transfer, Pay Now, Bill payment, etc.

Project Scope:

Modules: Software Token (SWT) & Non-Software Token (SMS, HWT, SMS-HWT)

NTB: New to Bank User (First time login into INB and MB), T&C Accept, Force Change PIN.

ETB: ETB are customers with CIF and has active product holdings with OCBC

1FA: Access Code + Pin Login Successfully (Able to go into Dashboard and View Balance but sensitive details will still be masked)

2FA: Elevated Successfully with correct SMS/HWT, OTP, Push Authentication for SWT user When login INB.

3FA: Meant Fraud Management System, also know OOB (Out of Bank)/FHR (First High-Risk Transaction) Email/SMS OTP required after your 2FA is authenticated successfully.

Responsibilities:

Analyzing business requirements & specifications, planning, Script development and execution of Test Plans, Creating Test scenarios & Test cases mapping to the requirements.

Writing manual test cases for UI and API

Developing rest assured API tests

Developing Appium Scripts for Android/iOS using Java.

Attending Daily Standup's and Conducts Agile ceremonies

Maintained Traceability Matrix to make sure all combinations of test cases are covered.

The ability to build good working relationships within the team by communicating clearly, both verbally and in writing.

Weekly meeting with PO, Scrum Master and Platform leads to discuss critical issues regarding QA activities.

Performed Smoke, Functional, Regression testing and resolving of all the critical and open Bugs prior to Deployment.

Performed environment and API health checks.

Manage/enhance Kibana Dashboard for functional reliability

Manages MS CI/CD pipeline

Project#2:

Title: Imaging Viewers

Tools: UFT, JMeter, Jira, Docker, Kubernetes, Helm, SAP, Burps can, TwistlockScan, JMeter, GCP, AWS

Description:

The OpenText Imaging solution provides interfaces for integration with workflow, OpenText Archive Server, OpenText Content Server, and other business applications (SAP). With OpenText Imaging, documents can be captured, archived, and linked to all types of business objects within enterprise applications.

Roles & Responsibilities:

Estimates efforts for QA tasks of patch and version releases

Understanding/Review the user stories

Configuring Archive Link and VIM Document types.

Setting up Archive link for scanning and storing invoice images.

Configuring the VIM Document types for Viewers

Preparing comprehensive functional and technical design documents.

Implemented and manage then load test scripts of web viewer application

Preparing end-user training documents.

Creating and executing test cases.

Prepare the monthly status reports

Managing the Automation framework of windows and web applications

Validate the customers support tickets(L1/L2).

Mentoring the team, training existing and new resources on automation

Validate the test environment readiness

Manage the QA infrastructures.

Implement and manage CI/CD pipelines

Build and maintain the docker images on Kubernetes

Validated docker images compatibility in GCP and AWS cloud environment

Project#3:

Title: Rent A Center

Description:

RAC-Ecom is the online interactive portal where a potential/existing customer can rent an item.

Ecom is a suite of applications built on SAP Hybris platform; the data is maintained and moved through various systems MDM, RMS, WMS, ESB, and Lawson

Roles & Responsibilities:

Manage the automation framework

Estimate Automation efforts

Setup data in hybris

Developing test scripts

Involved in test scripts peer reviews

Understanding/Review the User Stories

Validated ES and ESB web services.

Validated the Hybris data against application UI

Work with Development team prior to re test the defects

Project#3:

Title: United Guaranty Corporation

Description:

United Guaranty Corporation offers mortgage insurance products that provide mortgage lenders and investors protection against default on a portion of the unpaid principal balance of a covered mortgage in the United State.

Roles & Responsibilities:

Managing the framework (merged reusable functions to framework, enhanced to work with multiple applications etc.

Building Automation Framework and identifying Automation scope

Providing estimation on automation effort

Reviewing and Creating Automated Test Cases

Developed a wrapper script for seamless integration of selenium scripts to ALM

Modified the framework to enable continuous integration model for UG

Prepare, Analyze and Maintain Script Execution Log and Execution Report

Generate Status Report on daily, weekly and monthly frequency

Mentoring the team, training existing and new resources in best automation practices

Participate in daily Scrum meeting to provide daily project status updates.

Executing UFT test scripts prior to Selenium automation

Project#4:

Title: Alfa Insurance

Description:

The objective of this project is to replace the existing legacy Policy Administration System for the various lines of business within property and casualty using Guide wire Policy Center, Billing Center and Claim center which are product platforms provided by Guide wire Software Inc. The Policy Center is a underwriting and policy administration system which can be customized and integrated with external systems in the existing architecture. Billing Center is a web-based enterprise application that coordinates, executes, and records receivables transactions for Insurance companies. Claim Center is web-based enterprise application provides support for end-to-end Claims management across all lines of business.

Roles & Responsibilities:

Participate in daily Scrum meeting to provide daily project status updates.

Participate in Sprint planning meeting to come up with activities and for the sprint.

Tested the application manually by executing test cases prior to automation

Developing Generic functions and test scripts

Review the test scripts

Involved in Sprint Retrospective meetings.

Coordinate with the off- shore, on-site leads and SMEs for the functional clarifications

Project#5:

Title: Napier Health Care

Description:

This project is three-tier architecture-based web-application that covers all departments of a hospital and automates various functionality of each department and integrates them. One track in this project aims at implementing health care services. It allows the patients to take online appointment and also to capture their details. It can also be used by hospital officials in various departments to capture and maintain patient data, services provided to patients, details of stock in various departments, check for infections periodically in various departments etc. The Project is a Web based application on HIS (Hospital Information Service) product. The main modules are Master Data Management and Security, Front Office, Nursing Station, Physician, Inventory, and SCM.

Roles & Responsibilities:

Interact with SMEs collect requirements and plan accordingly

Tested the application manually by executing test cases prior to automation

Involved in Smoke testing and send issues details daily basis

Responsible for writing, monitoring, Executing and evaluating application tests using QTP

Involved in review of scripts and data integration

Customized test scripts using synchronization points
